

What is ClickHouse?

ClickHouse is an **open-source**,
columnar **OLAP database**.

Designed for **blazing fast**
analytics of massive
volumes of data.

Speaks SQL fluently

Processes data very fast

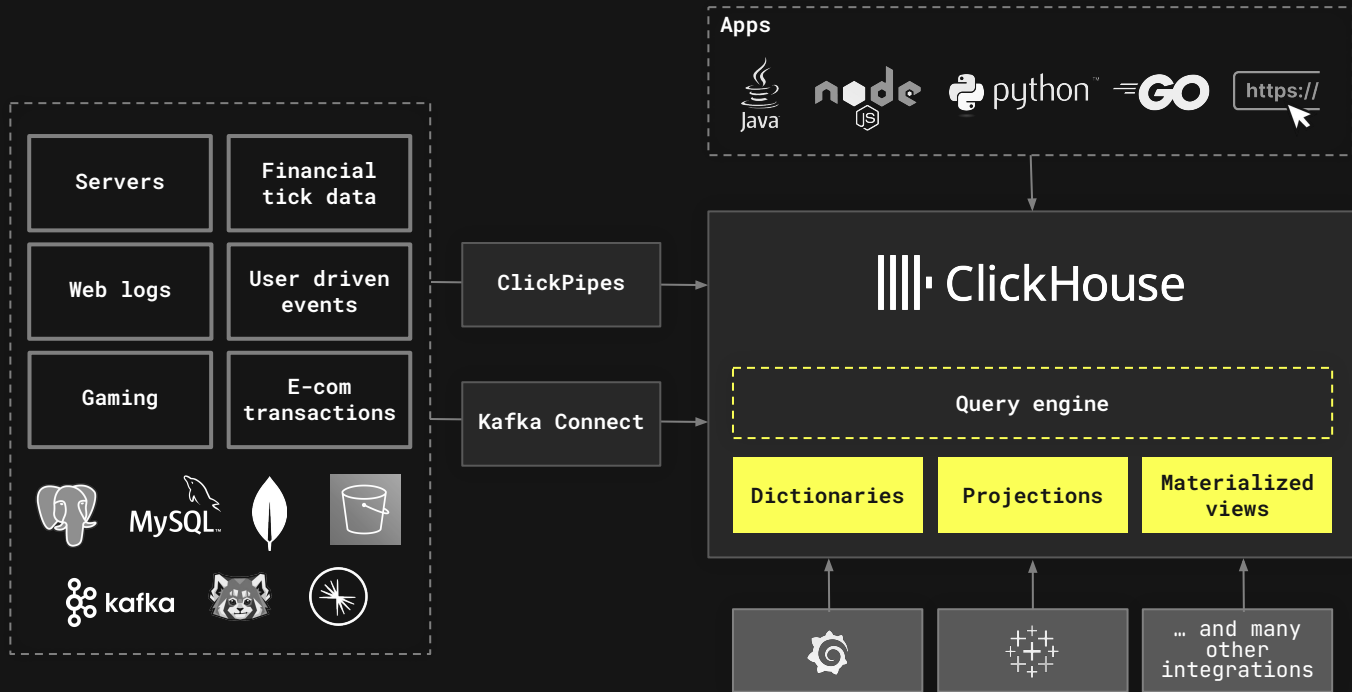

Highly efficient storage

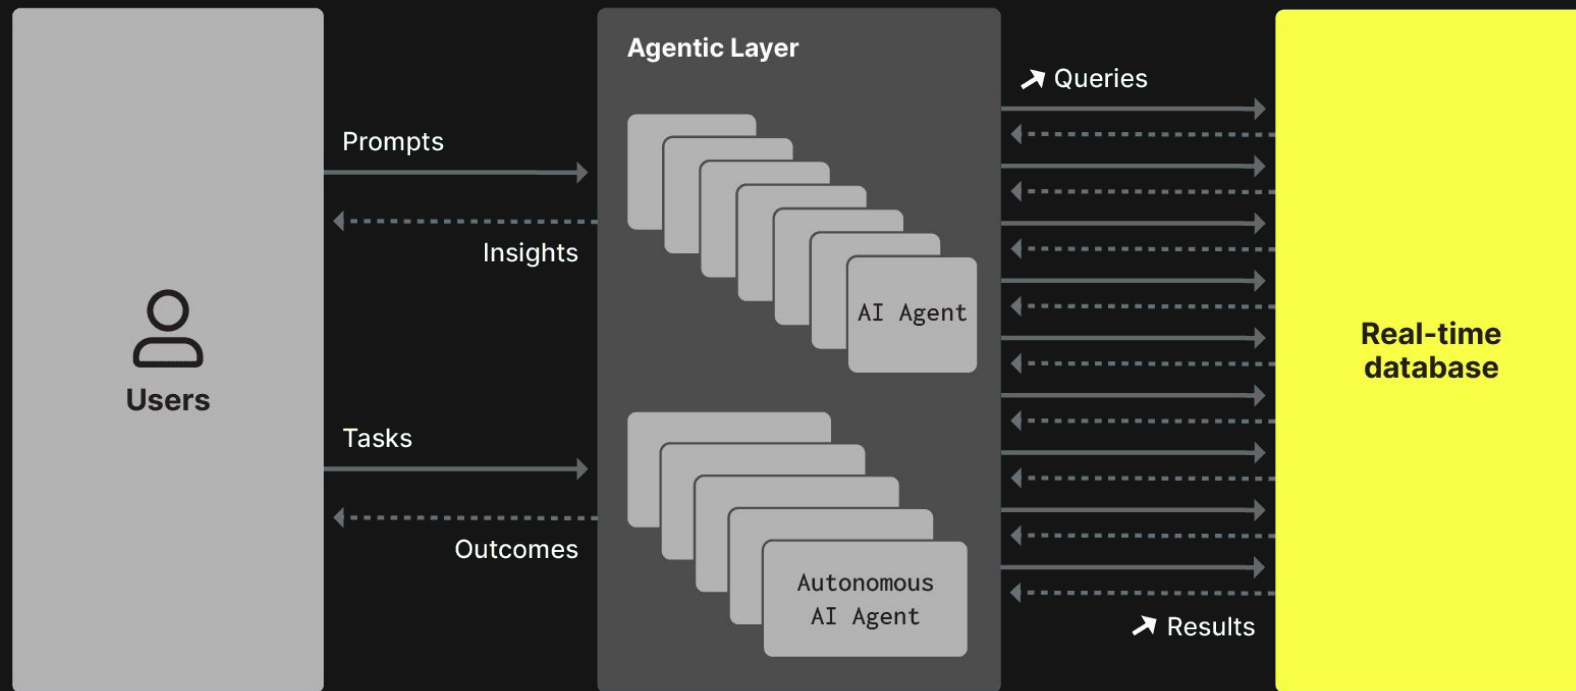

Easily scalable to any size

ClickHouse for real-time analytics

Agentic real-time analytics

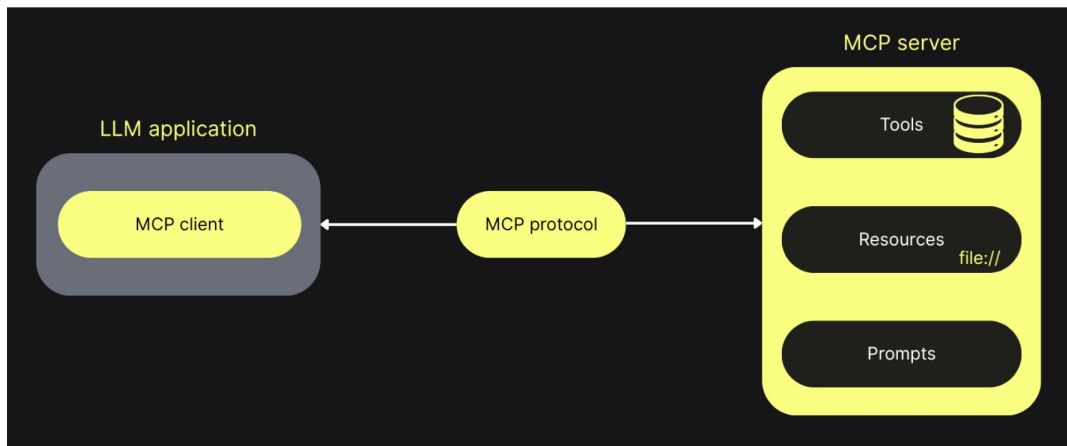

Vector Database or OLAP database

ClickHouse can do both!

We can store your data for powering agentic AI workloads and RAG systems.

- Vector DB + Vector similarity search
- Amazing DB with MCP for all types of structured data.
- We can also ingest unstructured data in JSON! All the data!

PostgreSQL

Most popular open source Transactional Database

- ACID compliant transactions
- Low-latency read and writes
- Rich SQL + extension framework
- Vast ORM and app ecosystem
- **Open Source**

Two great databases

ClickHouse

Fastest Analytical Database in the world

- Columnar Storage for fast aggregations
- Incremental Materialized Views
- Skip indexes + Lazy Materialization
- Native JSON and full-text search
- **Open Source**

One unified Stack

Postgres managed by ClickHouse

Fully managed Postgres service

- NVMe storage, ACID-compliant, enterprise HA, PITR, backups, encryption, private networking

Native CDC with PeerDB

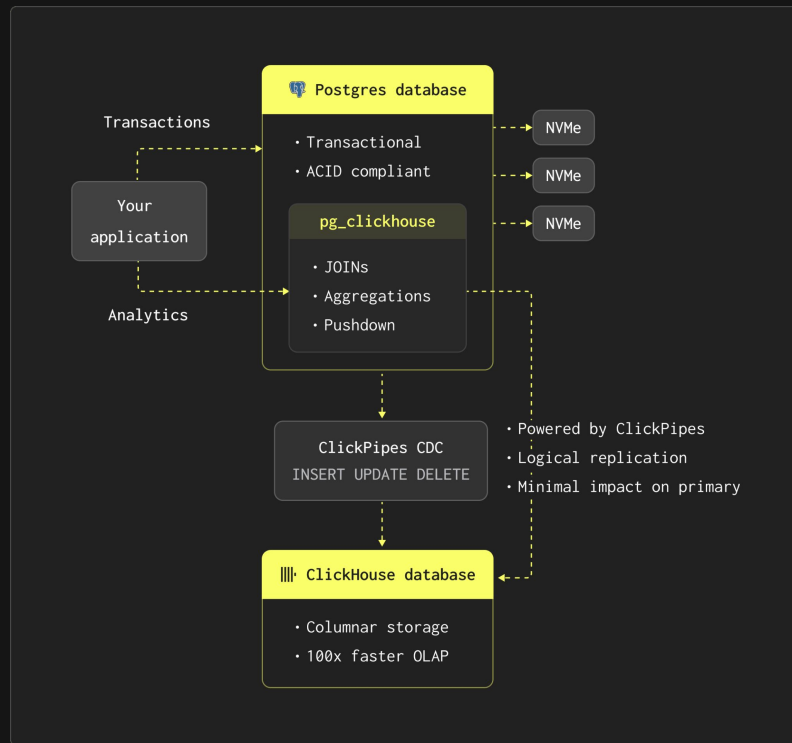

- Logical replication of INSERT, UPDATE, DELETE. Seconds-level latency

Unified query layer

- pg_clickhouse enables pushdown analytical queries to Clickhouse with zero app changes

Open-source foundation

- Postgres + ClickHouse + PeerDB + pg_clickhouse. No vendor lock in

LibreChat: Open-Source AI Chat Platform

- Multi-user chat interface for any AI provider
- Conversations & Files:
 - Bookmarks, multi-file upload, artifacts
- Highly configurable:
 - limits, models, tools, MCP, feature flags
- Agents:
 - No-code AI assistants with tools and specialized context
 - Multi-agents, Agents API, Sub-agents

Agent Builder

GitHub Agent

GitHub Agent

agent_N-d32-lk9y2a3dBnE0vzY

Description

Optional: Describe your Agent here

Category *

IT

Instructions

⊖ Variables

Note: if a specific `github` tool that would be better suited for the current task is not available, make it available by searching via `'tool_search'`

Model *

 claude-sonnet-4-6

Runreveal Joins the ClickHouse Family

Security is a data problem:

What makes security data hard isn't just volume, but the shape of the workload: cloud audit logs, identity events, endpoint telemetry, network flows. Security data pushes a database harder than almost anything else: continuous high-throughput ingest, retention measured in years, and queries that have to return while an analyst is still looking at the screen.

How can you start using ClickHouse?

Open Source

Open Source ClickHouse managed by your team, available under the Apache 2.0 license.

- Deploy on the any infrastructure
- High data compression
- Feature-rich
- Fast, scalable, reliable
- Active open-source community
- **Get Started**
<https://clickhouse.com/docs/getting-started/quick-start/os>
[s](#)

ClickHouse Cloud

Fully-managed by the creators of ClickHouse. All performance you expect, with efficiency of cloud.

- Separation of of storage and compute - eliminates sharding.
- Autoscale, interactive SQL console incl. ask AI and remote-MCP features.
- Available on AWS, GCP and Azure
- **Credit link next slide!**

Cloud is the easiest with the credits! If you have made a cloud account in the past please use a new email/fresh account!
- github required for OSS

Get help!

We have AI assistant in cloud We have AI docs, and in person support~

Get started now

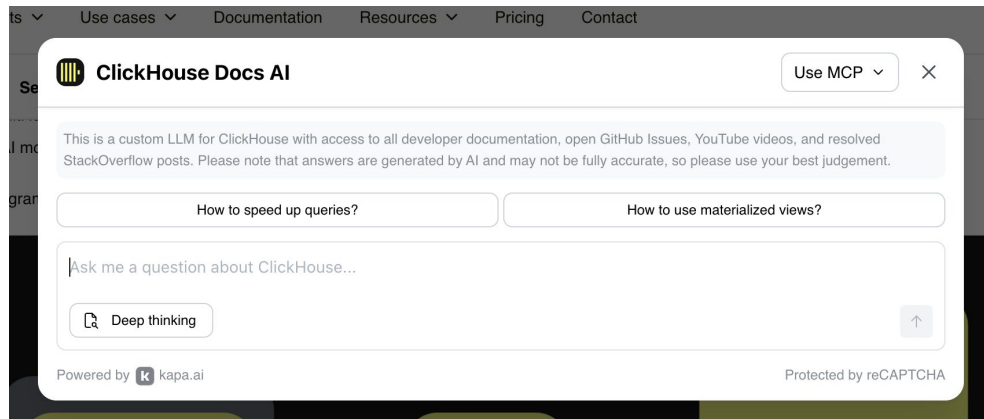

Get started by asking the AI assistant about your data. You can explore trends, patterns, and key metrics in seconds.

[How much data do I have?](#) →

[What does my data look like?](#) →

[How is my data changing over time?](#) →

[What are the most common values?](#) →

The ClickHouse Crew!
